In the claims:

1. A method for configuring media file properties for a digital document using a program property configuration tool, comprising:

   providing a first workspace for configuring programs, the first workspace including a plurality of program slots, wherein each program slot may be associated with a program;

   configuring a program in a program slot, the program having at least one program property, the program associated with the at least one program property.

2. The method of claim 1 wherein the program property is an object and the program is an object, the program object referencing the program property object and a media file.

3. The method of claim 2 wherein a first program object and a second program object reference the same program property object.

4. The method of claim 2 wherein a first program object and a second program object reference duplicate program property objects.

5. The method of claim 2 wherein configuring a program includes:

   importing the media file to the program property configuration tool.

6. The method of claim 1 further comprising:

   exporting the program.

7. The method of claim 1, further comprising:

providing an auxiliary workspace, the workspace including media configuring elements.

8. The method of claim 7, further comprising:

implementing the program property configuration tool as a graphic user interface, wherein the first workspace is implemented as a first GUI window, the auxiliary workspace is implemented as a second GUI window, each program object is represented by a program icon, and each program property object is represented by a program property icon.

9. The method of claim 7, wherein providing an auxiliary workspace includes:

providing a media search tool.

10. The method of claim 7, wherein providing an auxiliary workspace includes:

providing a scene configuration tool.

11. The method of claim 7, wherein providing an auxiliary workspace includes:

providing a slide configuration tool.
